

Aerating of turf areas, grassland and fields - is becoming increasingly vital, to overcome the hardpan caused by vehicle and human traffic - which otherwise inhibits healthy growth, moisture penetration and fertiliser uptake. HOWARD's solution, i.e. fast-rotating slitting blades producing clean verti-cuts to a depth of 15cm with 12cm distance between the slits - is one of the most effective methods available. Puddles are efficiently drained and the slits will remain functional for a long time, without visual scars. Full width rear roller with dual function of depth control setting and turf restoration, leaving minimum surface disturbance.

Specification	HA 16/155	HA 36/180
Working width, cm	155	180
Slitting rows	13	15
For tractor hp	25+	45+
Rotor speed, rpm	210	144 - 235
Weight, kg.	290	510

MOWER COLLECTOR HMC

The latest turf-care implement developed by HOWARD is a fast-cutting Rollerslasher with integrated clipping and leaf collector.

Through a vacuum impeller, the clippings are channelled and deposited into an easy-tip 310 l hopper.

Suitable for compact and medium sized turf tractors.

Resting on two full width rollers, this dual purpose machine leaves no scalping nor track marks.

Specification	HMC24/120
Cutting height, cm	1-9
Cutting width, cm	120
For tractor, hp.	35-55
Hopper capacity, l	450
