

Cover crop seeding in oil palm can be significantly rationalised by use of the newly developed Seeder Cultivators HSC 16 and HSC 36 for work behind small and medium sized tractors.

Ground wheel controlled reversible seed beam ensures accurate and multiple choice of seed placement rate.

Specification	HSC 16/155	HSC 36/180
Seeding rows, max	4	4
Row distance, cm	30	50
Acres/hour	2	2,5
Hp requirement, min	25	45
3-point linkage, CAT	I/II	I/II

### **FERTILISER BROADCASTER HFS 502**

The most accurate and economical placement of seeds is achieved by not mixing seeds with fertilisers, some of which may be moist and block the seed drop outlets.

Cover crops will establish faster, if after seeding, fertilisers are applied by a regular fertiliser broadcaster, benefitting also the young palms.

Refer to HOWARD's special brochure on Fertilising.
